<b>Preface</b>	7
<b>Summary: WIT report 2005</b>	9
<b>I Imaging</b>	13
• <b>Uniform resampling using the SINC function</b> . . . . .	15
<i>A.C. Camargo and L.T. Santos</i>	
• <b>Identifying multiple reflections with the NIP and Normal hypothetical wavefronts</b> . .	23
<i>J.C.R. Cruz, P. Chira, and F. de Souza</i>	
• <b>Correction of traveltimes and attributes</b> . . . . .	32
<i>Nils-Alexander Müller</i>	
• <b>True-amplitude CRS-based Kirchhoff time migration for AVO analysis</b> . . . . .	42
<i>Miriam Spinner</i>	
• <b>Velocity model update using migration to residual time</b> . . . . .	54
<i>Tilman Klüver</i>	
• <b>Velocity determination by image-wave remigration</b> . . . . .	66
<i>A. Novais, J. Costa, and J. Schleicher</i>	
• <b>Time and depth remigration in elliptically anisotropic media using image-wave propa- gation</b> . . . . .	76
<i>J. Schleicher and R. Aleixo</i>	
• <b>Investigation of the one-way wave equation</b> . . . . .	88
<i>B. Kashtan, E. Tessmer, and D. Gajewski</i>	
• <b>Fresnel-Volume-Migration of single-component seismic data</b> . . . . .	98
<i>S. Buske, M. Heigel, and S. Lüth</i>	
• <b>KGB-PSDM migration in constant gradient velocity media and sensitivity analysis to velocity errors. A comparison with Kirchhoff PSDM.</b> . . . . .	109
<i>C.A.S. Ferreira and J.C.R. Cruz</i>	
• <b>Inverting amplitude versus ray parameter curves using the reflection impedance con- cept</b> . . . . .	119
<i>L.T. Santos and M. Tygel</i>	
• <b>Localization of acoustic emissions by back-projection: inherent localization and timing errors</b> . . . . .	127
<i>D. Gajewski, B. Kashtan, E. Tessmer, and C. Vanelle</i>	
• <b>Imaging of crustal reflection data with the common reflection surface (CRS) stack method - New insight into the crustal structure of northern Germany</b> . . . . .	133
<i>M. Yoon, M. Baykulov, S. Dümmong, H.-J. Brink, and D. Gajewski</i>	
• <b>CRS-stack-based seismic imaging as a case study for basin reevaluation</b> . . . . .	143
<i>Z. Heilmann, L. Leite, and A. Gomes</i>	

<b>II</b>	<b>Rock physics and waves in random media</b>	<b>161</b>
	• <b>Attenuation of seismic P-waves in multilayered gas hydrate-bearing sediments</b> . . . . .	<b>163</b>
	<i>A. Gerner, E.H. Saenger, and S.A. Shapiro</i>	
	• <b>Leaky mode: a seismic wave attenuation mechanism in a gas-hydrate-bearing sediment</b>	<b>170</b>
	<i>S.R. Zanoth, E.H. Saenger, O.S. Krüger, and S.A. Shapiro</i>	
	• <b>Pore scale numerical modelling of elastic wave dispersion and attenuation in periodic systems of alternating solid and viscous fluid layers</b> . . . . .	<b>175</b>
	<i>R. Ciz, E.H. Saenger, and B. Gurevich</i>	
	• <b>Seismic effects of viscous Biot-coupling: finite difference simulations on micro-scale</b> .	<b>186</b>
	<i>E.H. Saenger, S.A. Shapiro, and Y. Keelm</i>	
	• <b>Slow compressional wave in porous media: finite difference simulations on micro-scale</b>	<b>194</b>
	<i>E.H. Saenger, R. Ciz, B. Gurevich, and S.A. Shapiro</i>	
	• <b>Impedance-type approximations of the P–P and P–S reflection coefficients and prediction of elastic parameters</b> . . . . .	<b>199</b>
	<i>A. Davolio, V. Grosfeld, and L. T. Santos</i>	
	• <b>Effective conductivity and diffusivity of randomly heterogeneous porous solids with compressible constituents</b> . . . . .	<b>209</b>
	<i>Tobias M. Müller</i>	
	• <b>Fracture related cross-over frequencies of seismic attenuation in porous rocks</b> . . . . .	<b>214</b>
	<i>M. Brajanovski, T.M. Müller, and B. Gurevich</i>	
<b>III</b>	<b>Modeling</b>	<b>219</b>
	• <b>Accuracy of heterogeneous staggered-grid finite-difference modeling of Rayleigh waves</b>	<b>221</b>
	<i>T. Bohlen and E.H. Saenger</i>	
	• <b>2.5D elastic finite-difference modeling</b> . . . . .	<b>236</b>
	<i>F.S. Neto, J. Costa, and A. Novais</i>	
	• <b>3-D CRS traveltimes hyperbolic approximations for reflections and diffraction events</b>	<b>247</b>
	<i>C. Lima, G. Garabito, and P. Chira</i>	
<b>IV</b>	<b>Other topics</b>	<b>255</b>
	• <b>A frequency criterion for smoothing with optimal cubic splines</b> . . . . .	<b>257</b>
	<i>J. Schleicher and R. Biloti</i>	
	• <b>Convergence of the traveltimes power series for a layered transversely isotropic medium</b>	<b>268</b>
	<i>M. Tygel and B. Ursin</i>	
	• <b>Application of Snell’s law in weakly anisotropic media</b> . . . . .	<b>279</b>
	<i>C. Vanelle and D. Gajewski</i>	
	• <b>The structural evolution of the Messinian Evaporites in the Levantine Basin</b> . . . . .	<b>288</b>
	<i>G.L. Netzeband, C.P. Hübscher, and D. Gajewski</i>	
	<b>The Wave Inversion Technology Consortium</b>	<b>299</b>
	<b>WIT research personnel</b>	<b>301</b>
	<b>List of WIT sponsors</b>	<b>307</b>
